# ABOUT US

Leak testing machine for sensor housings

HeMaTech Automatisierungstechnik GmbH & CO.KG is a family-run, medium-sized mechanical engineering company.

The company was founded in December 2020 and emerged from HeMaTech Industrieautomation GmbH, which was founded in 1992.

Location Schwaikheim, near Stuttgart.

The managing director is Mark Hellerich, and the former managing director of HeMaTech Industrieautomation GmbH, Harald Hellerich, is on hand to advise.

# OUR SERVICES

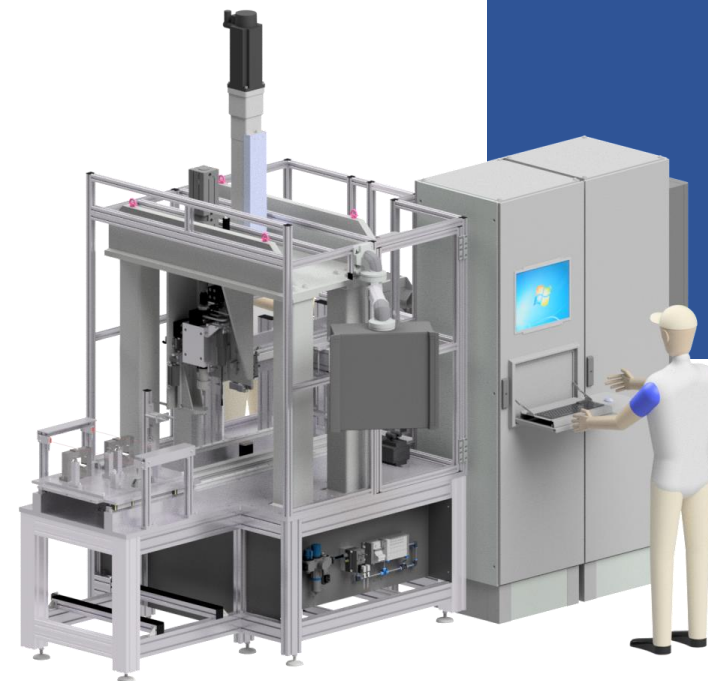

Project planning, construction as well as assembly and commissioning of special machines, assembly machines, test machines and test benches.

The design is done in 3D CAD using Autodesk Inventor.

The systems are assembled in our factory in Schwaikheim.

Our services also include recommissioning on site and the supply of spare parts.

The electrical planning, the control cabinet construction and the software programming are carried out by proven partner companies.

Joining machine with downstream pull-off test

Leak testing - Due to the close cooperation with our sister company, HeMaTech Prüftechnik GmbH & CO.KG, manufacturer of leak and flow test devices, we are able to deliver highly complex leak test systems and devices.

Ultrasonic and eddy current testing - Through years of close cooperation with regular customers and market leaders, we have extensive know-how in the automation of these tests.

Robot cells - We have a wealth of experience in the implementation of testing and handling tasks with (KUKA) robots.

Joining / cold shrinking – cooling components with liquid nitrogen and shrinking them in the process in order to then join them with almost no force is another core competence.

Leak testing machine as a rotary transfer system
